Memorial Sloan Kettering offers postdoctoral researchers a training environment that is rich in scientific resources as well as career-advancing support services. Our collaborative culture makes for an exciting and stimulating training experience where interdisciplinary teamwork and mentorship are strongly encouraged. The majority of our postdocs train in the 100-plus laboratories that make up the Sloan Kettering Institute. Renowned for its scientific excellence, SKI is the main division for laboratory research within MSK. Annual guidance from JAX's Postdoctoral Training Committee to help you succeed. Professional skills workshops including JAX's holistic The Whole Scientist course. We know that our differences contribute to creative problem-solving at the bench and in the workplace to facilitate our mission to improve human health. JAX Genomic Education is committed to recruiting talented Postdoctoral Associates from diverse backgrounds and identities, including those currently under-represented in the biomedical sciences. Maine. Background and Overview/Postdoctoral Training. Introduction. The Division of Comparative Medicine (DCM) at MIT has trained veterinarians in the field of laboratory animal medicine since 1982. Since that time, over 75 veterinarians have successfully completed a residency in our training program, and have gone on to establish themselves in positions of prominence throughout the laboratory animal community. Postdoctoral training, a critical component in the sequence of psychology training, has evolved significantly in recent years and largely in the absence of any organizing body or structure. Although APPIC has supported postdoctoral training for a number of years, its main focus has been on internship training. Beginning in 2012 with the formation of the APPIC Postdoctoral Workgroup (now the Postdoctoral Committee), APPIC has dedicated an impressive number of resources to the postdoctoral training community.
