If you're converting a conference paper to a journal article then you need to have a clear idea of exactly what needs to be done. You need to know the difference between the two types of papers. Now, there are multiple differences between journal articles and conference papers, but I'm only going to spell out two of the most important here. The journal article is often more specific, more bespoke, than the conference paper. A journal article is written for a specific audience. Paper for Scientific Writings: Scientific papers are for sharing your possess unique inquire about work with other researchers or for checking on the investigation conducted by others. As such, they are basic to the advancement of advanced science, in which the work of one researcher builds upon that of others. To reach their objective, papers must point to education, not inspire. Below is a table of differences between Paper and Article for Scientific Writings: Paper. Article. A paper is for the most part unpublished. Articles and papers in the Experimental Sciences. Let me illustrate this for the Biomolecular Sciences (biochemistry, molecular biology, molecular genetics and the like). As a practitioner in this area, when I hear these terms, e.g. talking to colleagues, I understand: Paper: A report of a piece of experimental research work in which the original data presented by the authors was central to interpretation and conclusions regarding advancement of knowledge and understanding of the field. Paper is a thin sheet material produced by mechanically or chemically processing cellulose fibres derived from wood, rags, grasses or other vegetable sources in water, draining the water through fine mesh leaving the fibre evenly distributed on the surface, followed by pressing and drying. Although paper was originally made in single sheets by hand, almost all is now made on large machines—some making reels 10 metres wide, running at 2,000 metres per minute and up to 600,000 tonnes a year. Articles are the little words that we put in front of nouns.
