A) Anatomy deals with the structure of the body and its parts; in other words, the names of the parts. Pictures of the inside of the body are often shown in isolation, using techniques such as cutaways, cross-sections, and â€œexplodedâ€ views, which provide clarity and understanding. But in reality, the inside of the body is a crowded place.

Kinds of anatomical studies. Microscopic anatomy is the study of structures that cannot be seen with the unaided eye. You need a microscope. Gross anatomy by systems is the study of organ systems, such as the respiratory system or the digestive system. ANATOMICAL TERMINOLOGY As I mentioned earlier, you must know the language of a particular field to be successful in it. Each field has specific names for specific structures and functions. Unless you know the names and their meanings, you will have trouble saying what you mean.
