Why Bother With Recess?

By **Cynthia A. Elder** and **Michael C. Obel-Omia**

One of Aesop's fables, "**The Goose That Laid the Golden Eggs,**" is the story of a couple whose desire for instant gratification deprived them of sustained riches. A husband and wife were so fixated on the golden eggs their goose laid every day that they decided to kill the bird. Anticipating great wealth, they cut it open, only to find flesh instead of gold. The moral of this story, of course, is that sometimes we make decisions that are shortsighted and result in intense losses.

Today's schools and educators are facing enormous pressures to achieve. The stakes are high. Many of the jobs current elementary students will fill as adults do not yet exist or will be completely re-envisioned by the time they enter the workforce.

Ironically, in an effort to prepare our students for these future challenges, schools have made decisions that may weaken our children's social, emotional, intellectual, and physical health, while crippling their ability to think creatively, gain self-confidence, and work collaboratively.

Recess is a valuable component of a child's time in school, a time when students can collect themselves, recharge their batteries, and challenge themselves in a different setting. And yet, recess is too often excised from the curriculum as unnecessary; that decision, like the one to kill the goose that laid the golden eggs, is shortsighted.

As of 2009, 30 percent of the nation's elementary schools had done away with recess altogether. Of those that maintained recess, 40 percent had cut it back significantly. If current trends continue, recess may soon be a thing of the past for our students.

"The decision to limit or eliminate the unstructured play afforded by a recess period may detract from students' ability to focus on the very subjects we use to measure success."

In the wake of the federal No Child Left Behind and Race to the Top policies, schools across the country have been scrambling to improve math and reading scores, beginning with students as early as kindergarten. This laudable goal may come at the expense of activities that help children to be productive learners during the school day.

More than ever, students must learn to self-direct, negotiate, invent, compromise, and take responsibility for their own actions. The decision to limit or eliminate the unstructured play afforded by a recess period may detract from students' ability to focus on the very subjects we use to measure success. Several thoughtful researchers have proved that creative thought, which is a large part of recess and play, can be viewed as an important aspect of problem-solving.

Why is unstructured play critical to student achievement? The answer lies, in part, in the way the brain processes information during a typical school day.

Directed or voluntary attention is the ability to focus, which allows a person to concentrate on work, reading, and tests. This limited resource can be depleted by long hours in a classroom or in front of a computer.

Involuntary attention, on the other hand, is the mind's reaction to sudden changes in the environment and provides a respite from the intensity of directed attention. Natural outdoor settings often trigger involuntary

attention, as we react to sounds, smells, and sights. It can also be stimulated by the unstructured and unpredictable nature of play.

Just as most adults require short breaks in the workday to maintain peak productivity, many recent studies demonstrate that daily recess for elementary school students can improve student focus and behavior, socialization, and school climate throughout the day.

With resources stretched to the limit, schools must look to the communities they serve for support in making quality play spaces and recess supervision possible. This commitment should be supported by state education policies that define recess as an essential element of the elementary school curriculum.

Community engagement, shared responsibility, and political will are required to preserve recess for future generations of students. The opportunity to coalesce around the simple fact that children benefit from playing represents a pathway for communities to build bridges across political, socioeconomic, and professional divides. A failure to do so will represent yet another shortsighted attempt to achieve a goal that requires patience, understanding, and awareness of how the developing child acquires knowledge.

Cynthia A. Elder is the director of communications for the Rhode Island Community Food Bank. She previously worked with the New Teacher Project and the Gordon School, an independent K-8 school in East Providence, R.I., focused on multicultural education. Michael C. Obel-Omia is the head of school at the Paul Cuffee School, an urban charter school in Providence, R.I.

Accessed 29 Jul. 2021. So should evangelicals bother with Lent? Whatever the popular conceptions, the season can encourage gospel-centered piety. But, before considering Lent's value, let's briefly discuss the benefits of the church calendar, in general. Confident of God's grace in Jesus Christ, we are free to probe the inner recesses of our hearts, unearthing sin's pollution. God's grace liberates us to explore our soul, facing its filth, rather than suppressing or succumbing to its contents. With David, we are free to pray Why Bother: Risks and Benefits The strengths of gamification and schools can be complementary, but they are not necessarily so. There are significant ways in which gamification and schools could each make the other worse. Bringing education and game elements together could turn out like peanut butter meeting chocolate: two great tastes working together, leading to results that are especially important for developing 21st century skills. bother definition: 1. to make the effort to do something: 2. If you can't be bothered doing/to do something, you are. Learn more. People who lead quiet lives not bothering with politics and the community are being somewhat selfish. From the Cambridge English Corpus. Since he also might not have, we should not be bothered by this result. From the Cambridge English Corpus. The most significant factor is one which is heavily loaded with features of general well-being such as being bothered by nerves or depressed. From the Cambridge English Corpus. The fact that his dissertation work on hyperinflation became his peak achievement bothered him. Quora is a bitch. it's so bullshit. I don't why the fuck I landed here. it's a fucked up mess. either I should be a person who shouldn't write about anything on Quora, or waste his time in writing about movies in Quora when nobody gives a fuck. I kinda quit Quora for now. I might answer later, anyways you won't care, so yeah, fuck this shit I'm out. I could've quit a long ago. I just pushed myself to see in future whether or not my answers will read by any. sometimes people read my shitty answers. and nobody even upvoted my answer. few people do. thanks for them.
