Some renewable energy technologies are already economically competitive with traditional fossil fuel or nuclear systems. Decentralized electricity options are attractive to small-scale private investment typically unavailable for larger centralized systems. And investment in renewable energy also offers the possibility of producing substantial new employment opportunities, a key goal in the United States, where unemployment remains too high. In terms of finance, the global renewable energy industry invested around \$260 billion in 2011 (and more in 2012), up from only \$40 billion in 2004. As much as \$500 billion worldwide may be required by 2030. In the United States, over \$57 billion was spent in 2011 on renewable energy, almost all of it private funding. There are many benefits to using renewable energy resources, but what is it exactly? From solar to wind, find out more about alternative energy, the fastest-growing source of energy in the world—and how we can use it to combat climate change. Select footage courtesy NASA. Demand for energy and associated services, to meet social and economic development and improve human welfare and health, is increasing. All societies require energy services to meet basic human needs (e.g., lighting, cooking, space comfort, mobility and communication) and to serve productive processes. Learn all the basic information from what climate change is to how we can defeat it. And learn how its even more cost effective than the status quo! This section is meant as a primer to the world of climate change and renewable energy. CleanTechnica has posted over 40,000 articles since its inception in 2008, however, reading all of them would take months, so the following is a distillation of the key pieces of the puzzle. By.
